Reviews

A high quality pdf as well as the typeface applied was exciting to see. It really is writter in simple words and phrases rather than difficult to understand. You will not really feel monotony at at any time of your time (that's what catalogs are for relating to in the event you question me).

Not illustrated. 1922 Excerpt: .are experimentally ascertainable with the exception of N, the equation furnishes a means of determining Avogadro s constant Actual experiments on ethylene made by Onnes and Keeson have shown that the method is a practical one; and the result of their work led to the value N = 75 x 1022, the experimental error being about 15 per cent. 1 Smoluchowski, Acad. Sci. Cracow, December, 1907. Rayleigh, Phil. Mag., 1881, 41, 86; Lorenz, (Euvres, I., 496. As was pointed out by Rayleigh, somewhat similar considerations apply to the blue light which comes to us from the sky on a clear day. Here it is assumed that the nitrogen and oxygen molecules act as diffracting centres. Measurements made by Brillouin1 lead to the value N = 60 x 10, !, but these results are probably not without sources of error. 4. The Determination of N from Properties of Emulsions. In the last chapter, some account was given of Perrin s researches upon the distribution of particles in emulsions; and it was pointed out that he used the equation--in which n and n are the numbers of particles observed in D and d are respectively the densities of the particle and of the liquid in which it floats; R and T are the gas equation constants; g is the gravity constant; and N is Avogadro s constant. It is evident that when Perrin had determined the relative numbers of particles in two layers at different altitudes in the...
