Combination Of V And Saddle-shaped Aches. How the V-shaped and saddle-shaped arch on one side only may be produced has already been described. How they may be combined on one side remains to be explained. Given thinness of process in the anterior part of the mouth, premature or tardy extraction of the first molar, and there will be a forward movement of the incisors. The development of the cuspid will press the alveolar process inward, thereby contracting the arch, and the tardily erupted bicuspid will adjust themselves to the limited curve as before stated. In this way the features of the two forms are combined; that is, a contracted or angular anterior arch, and a...
